

Clip on and Fusion extensions

made with
Ultima organic protein hair.

Save time and achieve a professional look with clip on hair extensions made from Ultima organic protein hair. Ultima is the closest thing to human hair in so many ways. It's organic and natural, making it soft, lustrous with an appearance and similar feeling like human hair.

Clip on has many advantages – adding volume, highlights and even color splashes quickly without damaging or changing your own hair.

Clip on organic protein hair is sold by Supreme Prota. This hair is affordable, and can be reused and easily removed.

Fusion is an alternative to weaving, and becoming extremely popular. A great way to add on hair and change up your appearance. The extension is attached with Ultima's Keratin based polymer tips joined at the root. Fusion technique lasts longer and has a more natural look. The process is painless.

Clip on

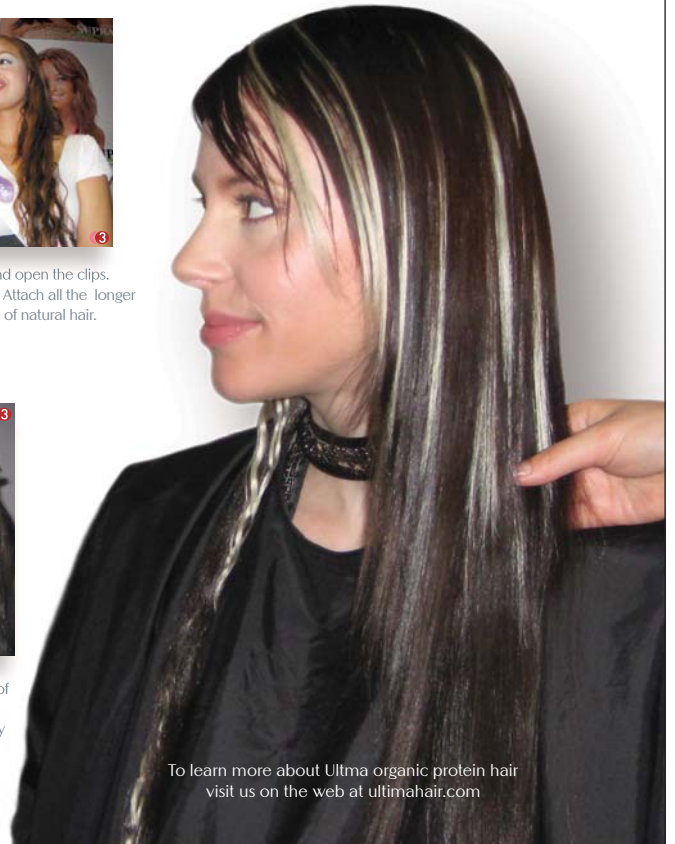

- ❶ Back comb and part hair where the first track will be attached. ❷ Measure pieces to be used and open the clips. Grab a bit of hair from where the first clip will be attached, twist and hold. Snap the clip down firmly. Attach all the longer pieces in the lower and middle section, making sure to spread tracks evenly for full coverage of natural hair.
- ❸ Natural hair should cover all the tracks and match the extension.

Fusion

- Section hair along the side of the face with a diagonal part from side of bang to nape. Grab a section of natural hair that can be held in place with a fine tooth comb. ❶ Take the Keratin tip bond of an individual fusion strand and place it around the small circular section of natural hair. Now quickly apply heat to the area where the bond and your real hair meet. ❷ Use the index and pointer finger to twist and roll the area until it becomes a small smooth cylinder shaped bond. ❸ Cut hair strand to blend with the natural hair length. Be sure to leave enough hair to cover bonds for a natural look.
